ABSTRACT

FullStack Java + Angular developer with 11 years of professional experience. During this time I have dedicated myself to continuously improve professionally in order to offer better results and share my knowledge in the projects in which I have participated. I have participated in many projects throughout my professional career ranging from a small change to large complete and complex software modernization processes whose challenges have been motivating, challenging and comforting as they take me out of my comfort zone and push me to develop new skills and acquire new knowledge. I have been able to share experiences with many areas outside my field, which has contributed a lot to my growth since I have seen a functionality and/or problem from different approaches and perspectives, allowing me to understand the origin and the context in general in order to offer a solution that is efficient and scalable in the future.

WORK EXPERIENCE

Neoris de México

Santander México S.A – Direct Client Assignment – Remote – DIC 2025 to MAR 2026

Project Role: *Sr. Java FullStack Developer + Angular*

Project Description: *Added a new process for assigning time-based online banking business collections, with the ability to file for bulk collections.*

Team Size: *5 People*

Responsibilities: *- Reception of waterfall project knowledge for its integration into the BET system. - Analysis of documentation and understanding of use cases and requirements. - Development of functionalities defined in use cases. - Follow-up of development flow. - Functional tests. - Integration testing. - Vulnerability scanning. – Carry out processes and management monitoring to support development. - Carry out processes and management monitoring to support the deployment flow in environments. - Review of application server to understand the configuration. - Application settings and configurations on application server to target environments. - Documentation of functional tests.*

Tools and Technologies: *JAVA 8, JAVA EE, JAVA JSF, ECLIPSE, SOAP, REST, ORACLE, SONARQUBE, IBM WEBSHERE, WATERFALL, DEVOPS, HTML, CSS3, JAVASCRIPT, GIT, GIT FLOW, GITHUB, GITHUB COPILOT, JENKINS, MAVEN, MICROSOFT TEAMS, FUNCTIONAL TESTING, SOFTWARE DEVELOPMENT, SOFTWARE ANALYSIS.*

Santander México S.A – Custom Made Product – Remote – JUL 2025 to NOV 2025

Project Role: *Sr. Java FullStack Developer + Angular*

Project Description: A new complete system was built whose purpose is the reconciliation of guarantees from different areas of the bank, processing massive files generated from the previous day and uploaded on the same day from the WEB portal.

Team Size: 3 People

Responsibilities: - Reception of knowledge of the project to be developed. - Analysis of recordings of the system's requirement survey. - Analysis documentation in Bank formats. - Design of Backend Architecture based on Microservices and Batch processes. - Modeling of data model for the system to be developed. - Generation of Technical Documentation, standards and guidelines to be followed in the system based on bank standards. - Generation, organization and development of microservices. - Migration of Microservices to Hexagonal architecture and generation of configuration files for Docker, Kubernetes and Microservices Configuration. - Unit Test Generation, SAST and DAST Mitigation and Vulnerability Mitigation with Sonarqube. - Generation of initial DB loading scripts and collection of base information for the operation of the system. - Iterative settings and configuration in deployments, Openshift, including, debugging with Grafana, volume generation, and configuration of rules in micros and deployments. - Generation, organization and development of Batch processes for massive file processing and information post-processing. - Development and integration of login process in Angular 18. - Configuration of Oracle DB in test environments. - Deployment of Batch services using Jenkins and Linux Servers

Tools and Technologies: JAVA 17, SPRINGBOOT 3.X, SPRING CLOUD, INTELLIJ IDEA, SOFTWARE ARCHITECTURE, MICROSERVICES ARCHITECTURE, SOFTWARE DEVELOPMENT, MICROSERVICES DEVELOPMENT, MICROSERVICES, AZURE ENTRA ID, MAVEN, OPENSIFT, POSTMAN, SONARQUBE, FORTIFY, API REST, CI / CD, DEVOPS, KUBERNETES, DOCKER, GIT, GITFLOW, GITHUB, GITHUB ACTIONS, DEVOPS, GITHUB COPILOT, FUNCTIONAL TESTING, UNIT TESTS, JUNIT, MOCKITO, HEXAGONAL ARCHITECTURE, ORACLE DBMS, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 18, SANTANDER UI FRAMEWORK, TECHNICAL DOCUMENTATION, GRAFANA, KAFKA, SPRING SECURITY, SPRING BATCH, JENKINS, SSH, LINUX, GLUON, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO

Coppel – Product Reengineering – Remote – JAN 2024 to JUL 2025

Project Role: [Sr. Java FullStack Developer + Angular](#)

Project Description: A new version (v3) of software was built for Coppel's legal and administrative department, migrating functionalities from the previous system, as well as applying new ones and improving the previously existing ones, in order to provide an optimal, stable and functional environment for day-to-day tasks.

Team Size: 35 People

Responsibilities: - Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. - Creation/Modification, Configuration and versioning of Microservices. - Monitoring of standards Coppel versioning with Git and GitFlow. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Modeling of functionalities by layers following the provided flows. - Continuous integration and deployment of functionalities. - Migration of

obsolete functionalities. - Mitigation of vulnerabilities with Sonarqube. - Generation of environment configurations, microservice settings and deployments with Docker in Kubernetes on Google Cloud. - Support in Deployments in environments and productive. - Generation of initial DB loading scripts and collection of basic information for the operation of the functionality.

Tools and Technologies: JAVA 17, SPRINGBOOT 3.X, SPRING CLOUD, INTELLIJ IDEA, SOFTWARE DEVELOPMENT, MICROSERVICES DEVELOPMENT, MICROSERVICES, AZURE, GOOGLE CLOUD, MAVEN, POSTMAN, SONARQUBE, API REST, CI / CD, DEVOPS, KUBERNETES, DOCKER, GIT, GITFLOW, AZURE REPOS, AZURE CI/CD, DEVOPS, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, POSTGRESS, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 15, BOOTSTRAP, TECHNICAL DOCUMENTATION, GRAFANA, SPRING SECURITY, SSH, LINUX, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO, JIRA, GOOGLE MEETS, GOOGLE DOCS, COPPEL MICROSERVICES ARCHITECTURE

Telcel – Product Reengineering – Remote – MAY 2023 to JAN 2024

Project Role: *Sr. Java FullStack Developer + Angular*

Project Description: *A new version of software was built for the management of cellular equipment warranties, migrating functionalities from the previous system, as well as applying new ones and improving the previously existing ones, in order to provide an optimal, stable and functional environment for day-to-day tasks.*

Team Size: *8 People*

Responsibilities: - Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. - Creation/Modification, Configuration and versioning of Microservices. - Monitoring of standards versioning with Git and GitFlow. - Data model and DB modeling with Telcel standards. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Modeling of functionalities by layers following the provided flows. - Continuous integration and continuous deployment of functionalities. - Migration of obsolete functionalities. - Mitigation of vulnerabilities with Sonarqube. - Generation of environment configurations, service configurations and deployments with IBM Websphere Liberty. - Support in Deployments in environments and production. - Generation of initial DB loading scripts and collection of basic information for the operation of the functionality. – Backend team leadership and mentoring. – Peer review and audit of backend code. – Configuration of tools, repositories. – Definition and modeling of software architecture. – Definition of profiling for backend applications. – Configuration, packaging and deployment of deliverables on application servers. – Tracking deliveries, mitigating vulnerabilities and deploying functionalities.

Tools and Technologies: JAVA 17, SPRINGBOOT 2.X, SPRING CLOUD, INTELLIJ IDEA, SOFTWARE ARCHITECTURE, SOFTWARE DESIGN, SOFTWARE DEVELOPMENT, REST SERVICES DEVELOPMENT, REST SERVICES, AZURE, IBM WEBSHERE LIBERTY, MAVEN, POSTMAN, SONARQUBE, API REST, CI / CD, DEVOPS, GIT, GITFLOW, AZURE REPOS, AZURE CI/CD, DEVOPS, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, CODE REVIEWS, CODE AUDIT, JUNIT, MOCKITO, POSTGRESS, ANALISIS DE REQUERIMIENTOS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 13 - 15, BOOTSTRAP, , DOCUMENTACIÓN TECNICA, GRAFANA, SPRING

SECURITY, SSH, LINUX, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO, JIRA, GOOGLE MEETS, GOOGLE DOCS, COPPEL MICROSERVICES ARCHITECTURE

CEMEX – Product Development – Remote – FEB 2023 to MAY 2023

Project Role: *Sr. .NET FullStack Developer + Angular*

Project Description: *New functionalities were developed and CEMEX's Multinational system was supported to manage national and international daily operations.*

Team Size:

Responsibilities: - *Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. - Monitoring of versioning standards with Git and GitFlow. - Modification and Creation of Tables of DB including Scripts and Initial Loading. - Continuous Integration and Continuous Deployment of Functionalities. - Migration of Obsolete Functionalities. - Mitigation of Vulnerabilities with Sonarqube.*

Tools and Technologies: *.NET, C#, .NET FRAMEWORK 4, VISUAL STUDIO, VISUAL STUDIO CODE, SOFTWARE DEVELOPMENT, SOAP SERVICES, API REST, REST SERVICES DEVELOPMENT, POSTMAN, GIT, GIT FLOW, GITHUB, SQL SERVER, SCRUM, REQUIREMENT ANALYSIS, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 11, BOOTSTRAP, CEMEX UI FRAMEWORK, MICROSOFT TEAMS, OPEN API, XML, JIRA*

Coppel – Product Reengineering – Remote – Mar 2022 to DEC 2022

Project Role: *Sr. Java FullStack Developer + Angular*

Project Description: *A new version (v2) of software was built for Coppel's legal and administrative department, migrating functionalities from the previous system, as well as applying new ones and improving the previously existing ones in order to provide an optimal, stable and functional environment for day-to-day tasks.*

Team Size: +35 People

Responsibilities: - *Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. - Creation/Modification, Configuration and versioning of Microservices. - Monitoring of standards Coppel versioning with Git and GitFlow. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Modeling of functionalities by layers following the provided flows. - Continuous integration and continuous deployment of functionalities. - Migration of obsolete functionalities. - Mitigation of vulnerabilities with Sonarqube. - Generation of environment configurations, microservice settings and deployments with Docker in Kubernetes on Google Cloud. - Support in*

Deployments in environments and production. - Generation of initial DB loading scripts and collection of base information for the operation of the functionality. - Migration from Monolithic architecture to Microservices.

Tools and Technologies: JAVA 11, SPRINGBOOT 2.X, SPRING CLOUD, INTELLIJ IDEA, SOFTWARE DEVELOPMENT, MICROSERVICES DEVELOPMENT, MICROSERVICES, AZURE, GOOGLE CLOUD, MAVEN, POSTMAN, SONARQUBE, API REST, CI / CD, DEVOPS, KUBERNETES, DOCKER, GIT, GITFLOW, AZURE REPOS, AZURE CI/CD, AZURE DEVOPS, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, POSTGRESS, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 11, BOOTSTRAP, TECHNICAL DOCUMENTATION, GRAFANA, SPRING SECURITY, SSH, LINUX, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO, JIRA, GOOGLE MEETS, GOOGLE DOCS, COPPEL MICROSERVICES ARCHITECTURE, DBEAVER, POSGRESS, RANCHER

TCPIP

Estudia Más – Continuous and Iterative Project – Face-to-face / Remote – OCT 2019 to FEB 2022

Project Role: Sr. [*NodeJS FullStack Developer + Angular \(JS/9/10\)*](#)

Project Description: *New functionalities were developed and support was provided to a Student Credit System mainly. As well as the migration of the system was initiated, improving the visual aspect using a more modern and functional stack, favoring maintenance and future growth since it was structured in such a way that it was easy both to maintain and to scale horizontally and vertically.*

Team Size: 4 People

Responsibilities: *- Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. - Monitoring of versioning standards with Git and GitFlow. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Layered functionality modeling following the provided flows. - Continuous integration and continuous deployment of functionalities. - Migration of obsolete functionalities. - Generation of environment configurations, service configurations and deployments in AWS EC2. - Support in Deployments in environments and production. - Generation of initial DB loading scripts and collection of basic information for the operation of the functionality. – Architectural design of version 2 of the frontend. - Frontend project structuring. – Generation is generic modules and components. – Definition and structuring of generic configurations for the integration of new functionalities.*

Tools and Technologies: NODEJS, INTELLIJ IDEA, SOFTWARE DEVELOPMENT, AWS, POSTMAN, API REST, CI / CD, DEVOPS, EC2, SQS, GIT, GITFLOW, AWS REPOS, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, MYSQL, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 9 / 10, BOOTSTRAP, TECHNICAL DOCUMENTATION, SSH, LINUX, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO, JIRA, ANGULAR JS, LOOPBACK3, NEBULAR UI, NESTJS

SpeiOK / Wire4 – Internal project – On-site – JAN 2019 to OCT 2019

Project Role: *Sr. Java FullStack Developer + Angular (8 / 9)*

Project Description: *An Administrative portal was developed for the monitoring, testing and subscription of the MONEX banking API, as well as the integration with the MONEX transaction executor service and the development of the technical documentation site and integration SDK.*

Team Size: *6 People*

Responsibilities: *- Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Architectural design and generation of initial backend and frontend projects. Initial project generation for documentation sites. - Development of frontend functionalities. - Testing backend and frontend functionalities. - Integration of functionalities with a system under development. - Tracking versioning standards with Git and GitFlow. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Layered functionality modeling following the provided flows. - Continuous integration and continuous deployment of functionalities. - Generation of environment configurations, service configurations and deployments in AWS EC2. - Support in Deployments in environments and production. - Generation of initial DB loading scripts and collection of basic information for the operation of the functionality. – Generation is generic modules and components. – Definition and structuring of generic configurations for the integration of new functionalities. – Configuration and setting of WSO2 for multi-tenant environments.*

Tools and Technologies: *JAVA 11, INTELLIJ IDEA, SOFTWARE DEVELOPMENT, AWS, POSTMAN, API REST, CI / CD, DEVOPS, EC2, SQS, GIT, GITFLOW, AWS REPOS, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, MYSQL, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 8 – 9, BOOTSTRAP, TECHNICAL DOCUMENTATION, SSH, LINUX, MICROSOFT TEAMS, OPEN API, SWAGGER, REST API, DRAWIO, JIRA, MAVEN, CORE-UI, WSO2, LIQUIDBASE, SHELL SCRIPTS*

Solser Information Technology

Coppel – Product Reengineering – On-site – OCT 2017 to DEC 2018

Project Role: *Sr. Java FullStack Developer*

Project Description: *A new version (v2) of software for Bancoppel was built, analyzing and migrating functionalities from the previous system, as well as applying new ones and improving the previously existing ones, in order to provide an optimal, stable and functional environment for day-to-day tasks.*

Team Size: *20 People*

Responsibilities: *- Reception of knowledge of the project to be developed. - Source code analysis in VisualBasic. - Setting and source code tests to validate analyzed functionalities. - Technical analysis of functionalities. - Creation of Use Cases. - Design and Layout of screens in Java FX. - Development of Backend functionalities. - Functional*

tests. - Packaging of versions for deliveries. - Deliveries of developed software packages. - Mentoring of the team in charge.

Tools and Technologies: *JAVA 8, JAVA FX, GIT, GITLAB, POSTGRESS, ECLIPSE, GITLAB, VISUALBASIC, TEAMVIEWER, WATERFALL, SSH, IBM WEBSPPHERE, MAVEN, SPRING FRAMEWORK, INFORMIX, SOAP, REST, JASPER REPORTS, STARUML, MEISTER TASK, EXCEL, WORD, SOFTWARE DEVELOPMENT, POSTMAN, API REST, GIT, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, POSTGRESS, REQUIREMENT ANALYSIS, TECHNICAL DOCUMENTATION, OPEN API, SWAGGER*

Novutek SC

ITSON – Made-to-order product – On-site – JAN 2017 to OCT 2017

Project Role: *Java FullStack Developer*

Project Description: *An ERP system was developed for ITSON's HR department, in which functionalities were generated for the department, including a graphical display of hierarchies and positions, salaries, payroll, resource and employee management, reports, prospecting and projections, in order to facilitate and improve the daily work of the department.*

Team Size: *30 People*

Responsibilities: *- Reception of knowledge of the project to be developed. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing of backend and frontend functionalities. - Integration of functionalities with a system under development. – Time estimates for functionalities. – Versioning of code with GIT. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Modeling of functionalities by layers following the provided flows. – Analysis of requirements survey. - Support of developed functionalities. – Packaging of versions to be delivered. - Generation of Scripts of initial DB loading and compilation of base information for the operation of the functionality.*

Tools and Technologies: *JAVA 8, SPRINGBOOT, INTELLIJ IDEA, SOFTWARE DEVELOPMENT, MAVEN, POSTMAN, API REST, GIT, FUNCTIONAL TESTING, PAIR TESTING, PAIR REVISIONS, UNIT TESTS, JUNIT, MOCKITO, POSTGRESS, REQUIREMENT ANALYSIS, SCRUM, TYPESCRIPT, CSS3, SASS, HTML 5, NODEJS, ANGULAR CLI, ANGULAR 2 - 4, BOOTSTRAP, TECHNICAL DOCUMENTATION, SPRING SECURITY, SSH, LINUX, OPEN API, SWAGGER, REST API, SQL SERVER, MYSQL*

Emcor Software

UAdminPro – Internal Product – On-site – May 2016 to Jan 2017

Project Role: *.NET Developer*

Project Description: *A multilevel and multi-company administrative system was developed for the management of inventories, sales, purchases, electronic invoicing, workflows, warehouse inputs and outputs, which were generated in a general way with the ability to specialize for each company registered in the system.*

Team Size: *10 People*

Responsibilities: *- Reception of knowledge of the project to be developed. - Interpretation and analysis of requirements gathering. - Analysis of functionalities and user stories. - Attention to ceremonies and stages of Scrum and Lean. - Design of functionalities by user story. - Development of backend functionalities. - Development of frontend functionalities. - Testing backend and frontend functionalities. - Integration of functionalities with a system under development. – Time estimates for functionalities. – Code versioning with TFS. - Modification and Creation of DB Tables including Scripts and Initial Loading. - Modeling of functionalities by layers following the provided flows. - Support of developed functionalities. – Packaging of versions to be delivered. - Generation of Scripts of initial DB loading and compilation of base information for the operation of the functionality. - Support in generation of versions in environments and production. – Support in the release of productive versions.*

Tools and Technologies: *.NET, C#, NET FRAMEWORK 4 – 4.5, HTML, CSS, JAVASCRIPT, SQL SERVER, TEAM FOUNDATION SERVER, WINDOWS FORMS, TELERIK, VISUAL STUDIO, AWS, TELERIK REPORTING*

Repobox

ERP Facturación – Internal Product – On-site – Feb 2016 to May 2016

Project Role: *.NET Developer*

Project Description: *Support was given to the functionalities, processes and business flows of the ERP billing system, as well as to support customers with adjustments in the system. Optimization of obsolete processes. Generation of functionalities for specific customers.*

Team Size: *10 People*

Responsibilities: *- Reception of knowledge of the project to be developed. - Interpretation and analysis of the lifting of requirements. - Development of backend functionalities. - Development of Windows Forms functionalities. - Creation and testing of scripts and stored procedures. - Analysis and adjustments in stored procedures. - Attention to improvements and customer requests.*

Tools and Technologies: *.NET, C#, NET FRAMEWORK 4 – 4.5, HTML, CSS, JAVASCRIPT, SQL SERVER, TEAM FOUNDATION SERVER, WINDOWS FORMS, CRYSTAL REPORTS*
